The partial hospitalization program (PHP) gives individuals comprehensive therapeutic treatment without the overnight stay. It is designed for adults, 18 and older, who are unable to function effectively in daily life and are not in imminent danger of harming themselves or others and offers treatment for a wide range of conditions, which include:

- Depression;
- Obsessive and compulsive behaviors;
- Chemical dependency;
- Phobias;
- Bipolar disorder;
- Other behavioral health problems.

In addition, educational groups are scheduled with a pharmacist and a dietitian. Each patient also meets with a psychiatrist at least three times per week.
