Virginia Hurricane Evacuation Guide

The 2023 Virginia Hurricane Evacuation Guide is an essential resource for families and communities.

Hurricanes are severe tropical storms, massive storm systems, that form over the open water in the southern Atlantic Ocean, Caribbean Sea, Gulf of Mexico and in the eastern Pacific Ocean. Each year, many coastal communities experience threats from hurricanes including heavy rains, strong winds, rip currents, floods and coastal storm surges from tropical storms and hurricanes.

A hurricane may spawn tornadoes. Torrential rains cause further damage by causing floods and landslides, which not only threaten coastal communities but may impact communities many miles inland. The Atlantic hurricane season runs from June 1 to November 30, with the peak occurring between mid-August and late October.

Tornadoes

Be prepared! Tornadoes may strike quickly, with little to no warning, causing extensive damage to structures and disrupting transportation, power, water, gas, communications and other services in their direct path and in neighboring areas.
